

DPost architecture

Big picture

DPost engine

DPost engine is a scala actors system, based on AKKA framework

It is containing about 6 actors with different roles.

Actor, that does the templates matching,

Actor, that connects SMTP and sends emails

etc...

DPost Administration (UI)

DPost has an MVC admin, which has all the features, that Play! Framework provides.

DPost SMTP provider connection

Currently 1 Dpost instance may connect 1 SMTP server.

In the future it is to change to allow many sites use 1 Dpost instance.
